Drive High—Get a DWI

Marijuana on the brain can put you and others on the road at risk.

SAFETY FIRST.

There is no 0.08 BAC equivalent for marijuana. Unlike alcohol, drug levels do not consistently correlate with specific levels of impairment.

If you intend to drive, the safest option is not to have any alcohol or drugs in your system.

From 2007 to 2013, there was a 48% increase in weekend nighttime drivers who tested positive for marijuana.

Using marijuana can decrease a driver’s focus, impair judgment of time and distance and slow reaction time.

In Texas, more than eight crashes every day involve drugged driving.
